# Do Your Part, Be SepticSmart:

## The Do's and Don'ts of Your Septic System

Learn these simple steps to protect your home, health, environment and property value:

## **Protect It and Inspect It:**

#### Do:

• Have your system inspected (in general) every three years by a licensed contractor and have the tank pumped, when necessary, generally every three to five years.

## Think at the Sink:

#### Don't:

- Pour cooking grease or oil down the sink or toilet.
- · Rinse coffee grounds into the sink.
- Pour household chemicals down the sink or flush them.

#### Do:

- Eliminate or limit the use of a garbage disposal.
- Properly dispose of coffee grounds & food
- Put grease in a container to harden before discarding in the trash.

### Don't Overload the Commode:

#### Don't:

 Flush non-degradable products or chemicals, such as feminine hygiene products, condoms, dental floss, diapers, cigarette butts, cat litter, paper towels, pharmaceuticals.

#### Do:

Dispose of these items in the trash can!

## **Shield Your Field:**

#### Don't:

- Park or drive on your drainfield. The weight can damage the drain lines.
- Plant trees or shrubs too close to your drainfield, roots can grow into your system and clog it.

#### Do

 Consult a septic service professional to advise you of the proper distance for planting trees and shrubs, depending on your septic tank location.

## Don't Strain Your Drain:

#### Don't

 Concentrate your water use by using your dishwasher, shower, washing machine, and toilet at the same time. All that extra water can really strain your septic system.

#### Do:

- Stagger the use of water-generating appliances. This can be helpful especially if your system has not been pumped in a long time.
- Become more <u>water efficient</u> by fixing plumbing leaks and consider installing bathroom and kitchen faucet aerators and water-efficient products.
