## Important Information

†Unit Value (Also referred to as Net Unit Value (NUV)) is the value of a single unit of the variable product's investment option. These Separate Account unit values are net of all EQ Advisors Trust and EQ Premier VIP Trust and in some products, other trusts, (including 12b-1 fees where applicable) and separate account charges and expenses, including specific mortality and expense risk charges, but do not reflect insurance, administrative or sales charges.

\* Performance is not annualized.

\*\* This is not part of standardized performance reporting.

***Please refer to these notes when reviewing applicable performance information on the accompanying pages. This performance data represents past performance, which is not an estimate, indication or guarantee of future results. Rates of return and principal will fluctuate, and units may be worth more or less than your original contribution when redeemed. Current performance may be lower or higher than the performance data quoted. Please note that investment portfolio decisions should not be based solely on Morningstar Ratings. The table above may not contain all subaccounts available to the product.***

***The current yield for the EQ/Money Market A portfolio as of 06/31/2019 is 1.65%. The current yield for the EQ/Money Market B portfolio as of 06/31/2019 is 1.65%. This yield quotation more closely reflects the current earnings of the investment portfolio than the total return quotation. It does not reflect any product related expenses or charges. This is a seven day current yield as of the last day of the month to which the performance relates. As of August 1, 2019 the EQ/Money Market Portfolio was designated as a "government money market fund," as defined in Rule 2a-7 under the Investment Company Act of 1940, and prior to that date the Portfolio invested in certain types of securities that it is no longer permitted to hold. Consequently, the performance shown may be different if the current limitations on the Portfolio's investments had been in effect prior to its conversion to a government money market fund You could lose money by investing in the portfolio. Although the portfolio seeks to preserve the value of your investment at \$1.00 per share, it cannot guarantee it will do so. An investment in the portfolio is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other government agency. The portfolio's sponsor has no legal obligation to provide financial support to the portfolio, and you should not expect that the sponsor will provide financial support to the portfolio at any time.***

†Performance results are the annual rates of return for contributions kept in the variable investment options for the period specified and are based on the change in accumulation unit value for each variable investment option. "Standardized" (SEC) performance shown reflects reinvestment of dividends and capital gains and is net of all recurring and non-recurring fees.

The "Non-Standardized" performance shown reflects reinvestment of dividends and capital gains and is net of all recurring and non-recurring fees except the annual administrative charge and the maximum applicable withdrawal charges. Please click on the prospectus link for information on the maximum withdrawal charges for the particular product you have selected. Withdrawals will be subject to ordinary income tax and, if made prior to age 59 ½, may be subject to an additional 10% federal income tax penalty. The performance figures do not reflect the cost of optional features, and if they did, performance returns would have been lower.

Please consider the charges, risks, expenses, investment objectives, carefully before making an investment portfolio decision. For a prospectus containing this and other information, click the prospectus button at the top right side of the application window. Read the prospectus carefully before making an investment portfolio decision.

"Variable Investment Option Inception Date" (VIO) is the date that the variable investment option was first offered to contract owners. The results shown for periods from the inception of a variable investment option are based on actual historical investment experience of the variable investment option within the contract. Results shown prior to the "VIO" inception date are hypothetical. The "Portfolio Inception Date" is the date that the underlying portfolio was established. Results shown from the Portfolio Inception Date to the Variable Investment Option Inception Date are hypothetical. For these "predating" instances when the variable investment options had not yet commenced operations (The time period from the Portfolio Inception Date to the Variable Investment Option Inception Date), we have shown hypothetical results that would have applied had it been in operation.

Equitable Financial Life Insurance Company, through its Equitable Investment Management Group, serves as investment manager of the Allocation Portfolios. Equitable is solely responsible for the asset allocation decisions made on behalf of each portfolio, and for the selection and allocation of assets to portfolios. Investing in the Allocation Portfolios will involve a higher overall cost than if you were to invest directly in the underlying portfolios. It is important to note that asset allocation does not assure a profit or protect against loss in a declining market.

Investments in large-cap companies may involve the risk that larger more established companies may be unable to respond quickly to new competitive challenges such as changes in technology and consumer tastes.

Investments in small/mid cap companies may involve greater risks than investments in larger, more established issuers because they generally are more vulnerable than larger companies to adverse business or economic developments. Such companies generally have narrower product lines, more limited financial resources and more limited markets for their stock as compared with larger companies.

Investments in foreign securities, including depository receipts, involve risk not associated with investing in U.S. securities. Foreign markets, particularly emerging markets, may be less liquid,

## Important Information (continued)

more volatile and subject to less government supervision than domestic markets. Differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices also may impact security values and it may take more time to clear and settle trades involving foreign securities.

Interest Rate Risk applies to fixed income securities. Fixed income securities will decline in value because of changes in interest rates. When interest rates rise, the value of a portfolio's debt securities generally declines. When interest rates decline, the value of a portfolio's debt securities generally rises. Despite the short maturities and high credit quality of the EQ/Money Market Portfolio's investments, increases in interest rates and deteriorations in the credit quality of the instruments the Portfolio has purchased may reduce the Portfolio's yield and can cause the price of a money market security to decrease.

Bonds rated below investment grade (i.e. BB by S&P or Fitch or Ba by Moody's) are speculative in nature and are subject to additional risk factors such as increased possibility of default, illiquidity of the security, and changes in value based on changes in interest rates. "Junk bonds" are usually issued by companies without long track records of sales and earnings, or by those companies with questionable credit strength.

Derivatives are subject to a number of risk such as leverage risk, liquidity risk, interest rate risk, market risk, credit risk and also involve the risk of mispricing or improper valuation. The Portfolio's investments in derivatives may rise or fall more rapidly than other investments.

Certain investments may involve credit risk. Credit risk is the risk that the issuer or the guarantor of a fixed income security, or the counterparty to a derivatives contract, repurchase agreement, loan of portfolio securities or other transaction, is unable or unwilling, or is perceived (whether by market participants, ratings agencies, pricing services or otherwise) as unable or unwilling, to make timely principal and/or interest payments, or otherwise honor its obligations.

Investing in value stocks is based upon a portfolio's manager subjective assessment of fundamentals of the companies he believes are undervalued. This style of investing may increase the volatility of the portfolio and may not produce the intended results over short or long time periods.

Larger, more established companies may not be able to attain higher growth rates of smaller companies, especially during extended periods of economic expansion.

Investing in growth stocks is based upon a portfolio manager's subjective assessment of fundamentals companies he or she believes offer the potential for price appreciation. This style of investing involves risks and investors can lose money.

For non-diversified portfolios, more of the portfolio's assets may be focused in a smaller number of issues or one sector of the market, which may make the value of the portfolio's shares more susceptible to certain risks than shares of a diversified portfolio. Investing in stocks of new and unseasoned companies may provide the potential for greater returns, but is generally more

volatile and the risks of loss of principal are greater than the portfolios investing in stocks of larger, more established companies.

Even though the market price of an exchange traded fund (ETF) is derived from the securities it owns, such price at any given time may be at, below or above the ETF's net asset value. Many ETF's invest in securities included in, or representative of, underlying indexes. A portfolio that employs an index strategy generally will not modify its index strategy to respond to changes in the economy, which means that it may be particularly susceptible to a general decline in the market segment relating to the relevant index. There is also the risk that an ETF's performance may not match that of the relevant index.

A portfolio that invests primarily in a particular sector could experience greater volatility than portfolios investing in a broader range of industries.

The risk that the principal on mortgage- and asset-backed securities held by a Portfolio may be prepaid, which generally will reduce the yield and market value of these securities. If interest rates fall, the rate of prepayments tends to increase as borrowers are motivated to pay off debt and refinance at new lower rates. Rising interest rates may increase the risk of default by borrowers and tend to extend the duration of these securities, making them more sensitive to changes in interest rates and they may experience additional volatility and losses.

A Portfolio that invests in Underlying Portfolios will indirectly bear fees and expenses charged by the Underlying Portfolios, in addition to the Portfolio's direct fees and expenses. The Portfolio is also subject to the risks associated with the securities in which the Underlying Portfolios invest.

Alternative investments use strategies that differ from the buy-and-hold strategy typical in the mutual fund industry. Compared to a traditional mutual fund, an alternative fund typically holds more aggressive non-traditional investments and employs more complex trading strategies. Alternative investments can be less liquid and more volatile than traditional investments and often lack longer term track records. Investors considering alternative funds should be aware of their unique characteristics and risks as described in the prospectus before investing.

In general, stocks and other equity security values fluctuate, and sometimes widely fluctuate, in response to changes in a company's financial condition as well as general market, economic and political conditions.

Portfolio features Equitable's proprietary managed-volatility strategy (or may invest in underlying portfolios that feature this strategy) that currently utilizes futures and options to manage equity exposure when market volatility increases above specific thresholds set for the portfolio. It is not possible to manage volatility fully or perfectly, which could cause these portfolios to underperform or experience losses.

What is a Variable Annuity?

## Important Information (continued)

A variable annuity is a long-term, tax-deferred accumulation product. In its most basic terms, an annuity is a contract between you and an insurance company to accumulate funds and then to provide lifetime payments. A variable annuity allows you to adopt a personal investment strategy to allocate your investment among a range of investment portfolio options. An annuity contract has two phases: An accumulation phase, which allows tax-deferred growth potential, and an annuitization phase, when you withdraw your money plus any earnings your annuity has accumulated.

There are fees and charges associated with variable annuities, which include, but are not limited to, mortality and expense risk charges, sales and surrender charges, administrative fees, and additional charges for optional benefits. Amounts in the annuity's variable investment options are subject to fluctuation in value and market risk, including loss of principal. Certain types of contracts, features and benefits may not be available in all jurisdictions.

Annuities contain certain limitations and restrictions. For costs and complete details, contact a financial professional.

Variable annuities are issued by Equitable Financial Life Insurance Company(NY,NY). Co-distributed by affiliates Equitable Advisors, LLC (member [FINRA](#) and [SIPC](#)) and Equitable Distributors, LLC.
